## INVITATION TO BID

### Introduction

The North Fork John Day Watershed Council (NFJDWC) is a 501c3 non-profit organization located in Long Creek, Oregon. The NFJDWC's mission is to restore and protect the natural resources that make up the North and Middle Fork John Day Watersheds. The Council represents broad interests, as well as diverse land use and ownership and encourages collaboration between the people who live, work, and recreate here to plan and implement ridgetop to ridgetop restoration projects based on the best available science, promote native plant and wildlife species, respect culturally significant resources, and support our local rural communities.

### Project Summary

Camp Creek, a tributary to the Middle Fork John Day River, is located just upstream of Galena, OR, in Grant County. Camp Creek provides important habitat for mid-Columbia listed summer steelhead and spring Chinook salmon, as well as other native species. The purpose of the Camp Creek Reach 1 project is to restore lateral and vertical connectivity of the historic channel networks and floodplains, increase habitat complexity and quality for at-risk fishes through the addition of large wood, and enhance degraded riparian areas affected by lowered water tables. Specific quantifiable goals for the project area include increasing; total wetted area, total area of available habitat, percentage of primary pools, frequency of pools and large wood densities. This will be accomplished by placing ~1,400 trees and 8-10 tons of logging slash, 54 large wood structures and 22 beaver dam analogs. ~16,000 cubic yards of material will be cut and redistributed to fill areas, and 2.5 miles of relic side channels will be reconnected.

### Details

A *mandatory* pre-bid site tour will take place on **May 2, 2024 at 1pm** along Forest Service road 36 (Camp Creek road), just upstream of the bridge crossing the Middle Fork John Day River (see map). Bidders must RSVP via email to [javan@nfjdw.org](mailto:javan@nfjdw.org) or phone (541) 421-3018 by **May 1, 2024**.

## *Appendix A: Scope of Work, Contract and Maps*

This Contract is entered into to accomplish the following tasks for the following purposes:

### **Project Description**

Operated Equipment Rental with direction by NFJDWC and USFS representatives.

This work will occur on US Forest Service property on Camp Creek, a tributary to the Middle Fork John Day River, in June-August 2024, unless Industrial Fire Prevention Levels (IFPL) delay the work to the fall.

- Excavator tasks will consist of picking up and moving previously felled trees or previously tipped trees up to 40 feet in length and 21 inch DBH with rootwad attached, tipping trees with rootwad attached, bury whole trees as part of wood structures, construction of new large woody debris structures using the locally removed/transported coarse and large trees in the stream or placement of woody material on adjacent floodplain. Excavator will also install posts at designated sites on side channels, floodplains, and stream banks to lock in woody material (streambank bioengineering). Sedge mats that are salvaged will be placed on berm removal/recontour areas to narrow main stream channel within designated areas associated with berm removal.
- Contractor will build earthen berms to divert flow as part of dewatering (and remove once completed), excavate side channels, and move a temporary bridge or place culverts for water crossings.
- Contractor must have the capability to excavate and fill to precise elevations. Project managers will mark cut zones with flagging, spray paint, and/or grade stakes to delineate boundary and desired elevation. Managers will provide geo-referenced maps indicating the boundary of the cut zone for use on the contractor's tablet or smartphone. Managers will work with the contractor during sediment removal, have RTK or Total station equipment on site to check elevations, and be available for questions.
- Wheeled grapple skidder would be utilized to move whole trees with rootwads and slash piles up and down the floodplain to stage at flagged wood structures and floodplain areas. Skidder must be capable of relocating trees 40 feet in length and 21 inches DBH, with root wads attached to wood structure locations. Multiple trees may be hauled at once and broken tops/slash shall be piled for grapple skidder to move. Large trees may have the top sawn off and tops skidded separately for limbs to remain intact. Skidder may also blade and compact fill areas.
- Bulldozer with ripper will be utilized to excavate ~ 16,000 cubic yards of material for use in other parts of the project. Excavation depths will vary across the project area (see cut/fill tables). Any large rock material (boulders) encountered shall be stockpiled and hauled to various sites across the project area and utilized as part of wood structures or floodplain roughness to lock material in place. Bulldozer will also be used to push material into fill areas.
- Biodegradable hydraulic oil will be used in equipment working in the floodplain.
- During implementation, equipment hours may be moved between equipment as agreed upon by COUNCIL and contractor.
